PROFESSIONAL SUMMARY

Senior Frontend Engineer with 6+ years shipping production React and Next.js products across healthcare, fintech, travel booking, and SaaS. I own large frontend systems end to end: App Router architecture, design systems, domain modeling, SSR and SEO, accessibility, and performance work that cut initial load by about 40% and key page load by about 25%. I partner closely with product, design, and backend, and I care how interfaces feel as much as how they scale. Seeking a Senior Frontend role in the Netherlands with room to grow into Staff level ownership.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES2017+), HTML5, CSS3, SCSS
Frontend	React 18/19, Next.js 15 (App Router, Server Components, SSR, SSG), React Native, Vite
Architecture	Feature based structure, DDD inspired frontend, Atomic Design, Clean Architecture boundaries, design systems
State and data	TanStack Query, Zustand, Redux, React Hook Form, Zod, REST, JWT, OAuth2
UI and design	Storybook, design tokens, shadcn/ui, Headless UI, Figma, responsive layout, visual consistency
Quality	Core Web Vitals, Lighthouse, WCAG 2.1 AA, Vitest, Jest, React Testing Library, Playwright, Cypress, ESLint, Prettier, Husky
Delivery	GitHub Actions, CI/CD, Docker, Vercel, Git, Agile, Scrum, code review, production monitoring
Realtime	WebSockets, Socket.IO, SignalR
Styling	Tailwind CSS, SCSS, BEM, RTL, i18n (FormatJS)

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer | Tapsi Doctor

May 2025 to Present

National telehealth platform | Tehran | Patient, clinician, and operations products at national scale

- Joined to unify frontend quality across products that had grown separately. Now own architecture and delivery standards for five production surfaces.
- Own frontend delivery across **5 production products** (patient app, consultation suite, operations console, physician workspace, shared design system). Align sprints with product and design so user facing polish and technical risk move together.
 - Migrated critical surfaces from Pages Router to **Next.js 15 App Router** with Server Components, SSR, SSG, metadata, and route level splitting. Converted **15 pages to SSR**, improved technical SEO, and cut initial load by **about 40%** (Lighthouse and production monitoring).
 - Designed and published a shared **DDD** inspired TypeScript package for business domains. Product teams stopped reinventing booking and visit rules in UI code.
 - Architected **Raasti Kit**, an npm distributed design system with **Storybook**, design tokens, and bundle budgets. Adopted by **5 teams**, reducing duplicate UI and giving design and engineering one interaction language.
 - Shipped JWT authenticated, role based health UI and realtime teleconsultation with **SignalR**. Delivered physician analytics on React 19 and **Vite**, with Vitest, Husky, and release ownership through production monitoring.

Frontend Consultant | Independent

Jun 2024 to Apr 2025

Travel booking and private MVP products | Remote | Product UI, architecture, and delivery foundations

- Worked with early product teams that needed senior frontend judgment before hiring a permanent FE org. Focused on booking UX and foundations that would still hold after handover.
- Built a travel booking experience across web and mobile with React Native, Next.js, and **TanStack Query**. Partnered with design on search, listing, and checkout flows, including **WCAG** aligned forms so travelers could complete bookings without accessibility dead ends.
 - Diagnosed slow booking screens against Lighthouse budgets. Introduced code splitting, lazy loading, and SCSS delivery standards that improved perceived performance on high intent paths and made later feature work cheaper to land.
 - For private MVP projects, set greenfield **Next.js 15 App Router** architecture: routing conventions, SSR strategy, JWT API integration, feature based structure, and shadcn/ui standards. Gave founders and small teams a clear path to ship without inventing structure every week.
 - Standardized forms, client state, and realtime patterns (React Hook Form, Zustand, Socket.IO) across engagements. Left short architecture notes so client engineers could continue the same patterns after handover.

Frontend Engineer | Nobitex

Feb 2022 to Jun 2024

Cryptocurrency exchange | Tehran | Public trading product and internal operations tooling

- Spent more than two years on a high traffic exchange where frontend mistakes show up as lost trust in live prices and orders. Grew from feature delivery into shared UI standards and performance ownership.
- Shipped trading and account features in React and TypeScript with JWT sessions. Worked with product and backend on flows that had to stay correct when market activity spiked.
 - Built and hardened [Socket.IO](#) dashboards for order books, tickers, alerts, and notifications so traders could trust realtime market data under peak throughput.
 - Improved key flow page load by **about 25%** (analytics and Lighthouse) through rendering, bundle, and asset work. Drove adoption of a shared [shadcn/ui](#) and [Storybook](#) library that reduced duplicate components across teams.
 - Debugged production UI issues with backend partners, improved error handling around auth and market data gaps, and documented conventions that shortened onboarding for engineers joining trading surfaces.

Frontend Developer | Axon

Oct 2019 to Feb 2022

Healthcare marketing and CRM | Tehran | Public growth site and internal sales operations tools

- Started on marketing facing pages and grew into CRM tooling and shared frontend structure. Learned how SEO, design, and sales operations pull the same UI in different directions.
- Built SEO oriented landing pages and responsive SCSS component patterns for [axon.me](#) with marketing and SEO stakeholders. Treated landing UI as a growth surface with clear hierarchy and consistent visual rhythm.
 - Delivered CRM tables, admin dashboards, and multi step workflows that cut repetitive manual work for sales and operations. Sat with operators to understand where the product wasted their time.
 - Introduced Redux for multi page state predictability and BEM modular CSS so new UI shipped faster with fewer style regressions. Translated stakeholder requests into maintainable component work instead of one off page edits.

EDUCATION

B.S. Computer Science | Alzahra University | 2017 to 2021

M.S. Computer Science (Data Mining) | Kharazmi University | Expected 2026 | part time, thesis in progress

TECHNICAL WRITING

React 19 Compiler and performance patterns

Unified frontend data pipelines

[useEffectEvent](#) deep dive

LANGUAGES

English | Fluent

Persian | Native

Turkish | Professional

Dutch | A2, progressing to B1
